

## Burndown chart

Graph1: Graph shows burn down chart for sprint 3

## Velocity

Current Sprint Velocity – 20  
Previous Sprint Velocity – 12

### Reasoning:

The reason behind all the sharp increases and decreases was because we would add sub tasks the same day as completing the subtasks instead of adding them at the beginning of the sprint.

Further, the incomplete chart shows that we assigned a lot more users stories for this sprint than we could've completed.

We will now use this as a guide to completing our last sprint. We would now proper break down tasks at the beginning and prioritize which features we want to polish.
