Image1: Image showing Network Diagram with various tasks and their dependencies

To keep the sprint on schedule we had daily stand-ups to track progress. This way we were able to check in on the progress every day and adjust our priorities accordingly. This frequent communication with the team also allows us to prioritize and assign tasks very efficiently.

We initially planned to finish a lot more user stories this sprint. However, we were not able to finish them all because we ran into difficulties when selecting a database. This resulted in late connections to the databases so we couldn't implement all of the services that depends on it.

We did not break down the user stories that were more complex into more manageable subtasks and as a result we underestimated how much time and effort it would take us to complete them. Moving forward we will break them down into subtasks that are more manageable and assign them story points accordingly.
