# Burndown Chart

Graph1 : Graph shows burn down chart for sprint2

Velocity

Current Sprint Velocity - 12 story points
Previous Sprint Velocity - 0 story points

Reasoning:
The reason there was 0 story points completed for the first iteration was because we did not break down the user stories into simpler terms. Our sprint1 was focused on front end development and not many of our user stories could've been completed.

Further, we didn't have the story points enabled on Jira until July 7th. Previously, we created a label and labelled each as 1-10. This accounts for the shape of the burn down chart as well as the 0 story points for sprint1 velocity.
